| **Project Name** | ComicCraft |
| **Maximum Marks** | 3 Marks |

## Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

### Step 1: Submission Checklist

| S.No | Item to Submit | Submitted (Yes / No / NA) |
|---|---|---|
| 1 | Complete source code (all files and folders) | 1 |
| 2 | README / Setup Guide (instructions to run the project) | 2 |
| 3 | requirements.txt / package.json / dependency file | 3 |
| 4 | Database schema / seed files (if applicable) | 4 |
| 5 | Environment configuration file (.env.example or similar) | 5 |
| 6 | Deployed application URL (if hosted) | 6 |
| 7 | APK / Executable binary (if applicable for mobile/desktop apps) | 7 |
| 8 | Dockerfile / Containerization config (if applicable) | 8 |
| 9 | Test files and test results | 9 |
| 10 | Demo video or walkthrough (if required) | 10 |

### Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

[Paste or describe your folder structure here. Example:]

/project-root
/src - Source code files
/tests - Test files
/docs - Documentation
/config- Configuration files
README.md- Setup and run instructions
requirements.txt - Python dependencies (or package.json for Node)

### Step 3: Deployment / Access Details

| Field | Details |
|---|---|
| **Hosted / Deployed URL** | Demo/local environment; URL to be inserted after final hosting. |
| **Login Credentials (Demo)** | Demo account created in the application; credentials shared separately for evaluation. |
| **Platform / Hosting Provider** | [e.g., Render, Vercel, AWS, Heroku, Azure] |
| **Repository Link** | |
| **Demo Video Link** | |

### Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

**Pre-requisites:**

[List required software, versions, and system requirements]

Step 1: [e.g., Clone the repository: git clone <url>]

Step 2: [e.g., Install dependencies: pip install -r requirements.txt] Step 3: [e.g., Configure environment: copy .env.example to .env] Step 4: [e.g., Run database migrations: python manage.py migrate] Step 5: [e.g., Start the application: python manage.py runserver] Step 6: [e.g., Open browser at http://localhost:8000]

### Step 5: Known Issues / Limitations

| S.No | Known Issue / Limitation | Workaround / Status |
|---|---|---|
| 1 | AI output can vary between requests. | Use structured prompts and validation; monitored. |
| 2 | External AI API requires internet/API availability. | Show a clear error and retry option. |
| 3 | Image generation is not part of the current MVP. | Storyboard is text-first; image generation is planned. |
