Project Name	ComicCraft
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman / Flask test client
Type of Testing	Load and response-time testing
Target Module / API	Story generation and project creation endpoints
Test Environment	Local Flask server
Test Date	03 October 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Single user creates a project	1	60	Successful response without errors
2	Concurrent story-generation requests	5	60	Stable response and no request failures
3	Peak short burst of requests	10	30	Graceful handling without server crash
4	Repeated project save requests	10	60	All valid requests processed correctly

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.6 sec	Pass	Within target in local test
2	Response Time (Max)	< 5 seconds	3.8 sec	Pass	AI API variation observed
3	Throughput (Req/sec)	1.0	1.4	Pass	Measured during controlled test
4	Error Rate	< 1%	0.0%	Pass	No failed requests in test run
5	CPU Utilization	< 80%	58%	Pass	Local environment
6	Memory Utilization	< 80%	62%	Pass	Local environment

Step 4: Observations & Analysis

Key Findings:

[Describe what the test results revealed about your system's performance]

Bottlenecks Identified:

[List any performance bottlenecks observed during testing]

Optimization Steps Taken:

[Describe any changes or optimizations made to improve performance]

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):

[Insert Screenshot 1 here]
