Solution Requirements

Date	03 October 2026
Team ID	6ab4fdb0a238dc999eb66571
Project Name	ComicCraft
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Secure login using email/password and hashed credentials.	High
2	Authorization levels	User role can create/manage own projects; admin role can manage system settings if enabled.	Medium
3	External interfaces	*[Detail any third-party APIs, external databases, or*	High

		services the system must connect to]	
4	Transactions processing	Validate prompt data, submit generation request, receive response and save project output.	High
5	Reporting	Provide project history and basic generation/test summary information.	Medium
6	Business rules, etc.	Require valid project name/prompt; maintain ordered panels; limit overly large prompts; preserve user project ownership.	High
7	Compliance to laws or regulations	Avoid storing unnecessary personal data; protect API keys; provide basic privacy notice and safe-input handling.	High
8	*Other*	Allow users to edit generated text before saving/exporting.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria

1	Performance & Speed	Secure login using email/password and hashed credentials.	*(e.g., Page loads in < 2 seconds)*
2	Scalability	User role can create/manage own projects; admin role can manage system settings if enabled.	*(e.g., Supports up to 10,000 concurrent users)*
3	Security & Data Privacy	Integrate Groq API for AI-generated story, dialogue and captions.	*(e.g., End-to-end AES-256 encryption)*
4	Reliability & Availability	Validate prompt data, submit generation request, receive response and save project output.	*(e.g., 99.9% uptime per month)*
5	Usability & Accessibility	Provide project history and basic generation/test summary information.	*(e.g., Complies with WCAG 2.1 AA standards)*
6	*Other*	Require valid project name/prompt; maintain ordered panels; limit overly large prompts; preserve user project ownership.	High
